

iGrafx® ACCELERATORS

Reference Frameworks:

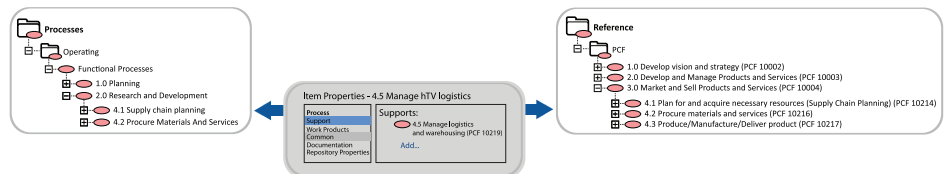

- APQC Process Classification FrameworkSM
- VCG Business Process Transformation Framework

Features :

- Rapidly define enterprise business and process architectures
- Visualise compliance and gap analysis
- Facilitate improvement with industry benchmarking

Get Off on the Right Foot

iGrafx Accelerators enable Enterprise Business Architects to define enterprise models more quickly by leveraging published enterprise frameworks as a starting point. As your organisation's model evolves, iGrafx helps ensure it remains aligned with appropriate industry standards and highlights areas of competitive differentiation.

iGrafx Accelerators speed up the creation of enterprise models inclusive of business and process architectures by starting you off with industry-recognised content to model your own company architecture after. By linking an enterprise model with one or more frameworks, compliance and gap analysis is possible and organisations can focus process improvement efforts in areas that are competitive differentiators. In addition, alignment with some enterprise frameworks, e.g. Process Classification Framework, poises organisations to benchmark their performance with industry peers.

The frameworks are available in cross-industry and ten industry-specific formats: Aerospace and Defense, Automotive, Banking, Broadcasting, Consumer Products, Electric Utilities, Petroleum Downstream, Petroleum Upstream, Pharmaceutical, and Telecommunications.

iGrafx provides the PCF as both a reference model to benchmark against as well as an operational model to jump start the development of your process architecture. For more information regarding the PCF, visit www.apqc.org.

iGrafx PCF Accelerator

The PCF Accelerator is predicated on the APQC Process Classification FrameworkSM (PCF) developed as an open standard to facilitate improvement through process management and benchmarking, regardless of industry, size, or geography. The PCF organises operating and management processes into 12 enterprise level categories, including process groups and over 1,000 processes and associated activities.

iGrafx BPTF Accelerator

The BPTF Accelerator is predicated on the VCG Business Process Transformation Framework (BPTF) developed by the non-profit Value Chain Group for the establishment of business architectures encompassing best-in-class business process management, methodology and IT blueprinting. The standard framework promotes consensus and helps drive continuous improvement and transformation of processes. For more information regarding the BPTF, visit www.value-chain.org.
